vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified CDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of 11.M.A.G.E. clones 297480-302087, 682632-687239, 726408-728711, and 729096-731399. Subtraction by Bento Soares and M. Patima Bonaldo.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The present invention relates to compositions and methods for the therapy and diagnosis of cancer, particularly breast cancer. The method for biological sample the presence of a cancer in a patient comprises: obtaining a biological sample from the patient; contacting the biological sample with a binding agent that binds to the polypeptide; detecting in the sample an amount of the polypeptide that binds to the binding agent; and comparing the amount of the polypeptide to a predetermined cut-off value. Treating breast cancer comprises administering a composition comprising breast tumour proteins and nucleic acids, which simulates and/or expands T cells

The present invention relates to compositions and methods for the therapy and diagnosis of cancer, particularly breast cancer. The method for detecting the presence of a cancer in a patient comprises: obtaining a biological sample from the patient; contacting the biological sample with a binding agent that binds to the polypeptide; detecting in the sample win amount of the polypeptide that binds to the binding agent; and comparing the amount of the polypeptide to a predecermined cut-off value. Treating breast cancer comprises administering a composition comprising breast tumour proceins and nucleic acids, which simulates and/or expands I cells specific for the tumour protein. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   218
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            101

The present invention relates to compositions and methods for the therapy dead diagnosis of cancer, particularly breast cancer. The method for additional supply persone of a cancer in a patient comprises: obtaining a biological sample from the patient, contacting the biological sample with a biological sample from the patient, contacting the biological sample with a biological sample to the polypeptide; detecting in the sample an amount of the polypeptide that binds to the binding agent; and comparing the amount of the polypeptide to a predetermined cut-off value. Treating the amount proteins and nucleic acids, which simulates and/or expands T cells apposition for the tumour protein. The present sequence was used to
                                                                                                                                                                                                                                                                                             ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to compositions and methods for the therapy and diagnosis of cancer, particularly breast cancer. The method for detecting the presence of a cancer in a patient comprises: obtaining a biological sample from the patient, contacting the biological sample with a binding agent that binds to the polypeptide; detecting in the sample and amount of the polypeptide that binds to the binding agent; and comparing the amount of the polypeptide to a predetermined cut-off value. Treating breast cancer comprises administering a composition comprising breast specific for the tumour proteins and nucleic acids, which simulates and/or expands T cells specific for the tumour protein. The present sequence was used to

The present sequence is given in a specification relating to compositions and methods for the treatment and diagnosis of breast cancer. Nucleotide sequences that are preferentially expressed in breast tumour lissue, and the polypeptides encoded by such nucleotide sequences, are used in compositions and vaccines to inhibit the development of cancer, especially breast cancer. The progression of a cancer may be monitored by points and comparing the results from the different time points. On and/or CDS+ T-Cells isolated from the cancer patient may be treated with tumour-specific polypeptides, polypurcleotides encoding the polypeptides or antigen presenting cells expressing the polypeptides or antigen presenting cells expressing the polypeptides. The cells are then administered to the patient to inhibit development of cancer
                                                                                                                                                                             An isolated polypeptide comprising an immunogenic portion of a breast tumor protein used for inhibiting the development of cancer, especially breast cancer, and monitoring cancer progression in a patient.
                                                                    Misher LE,
                                                                                                                                                                                                                                                                       Claim 4; Page 185-186; 187pp; English

The present invention describes polynucleotide sequences (I) which encode prostate-specific proteins (II). (I) and (II) have cytostatic activity, and can be used in vaccine production and gene therapy. (I). (II), antibodies to (II), fusion proteins comprising (II), and isolated T cells prepared using (I) or (II) are used treat cancer in a patient. (I) and cancer that a also used in the detection of cancer in a patient. (I) and cancer that is diagnosed or treated is particularly prostate cancer. (I) and (II) can be used in vaccines. The antibodies or (I) can be used for monitoring the progression of cancer in a patient. (I) and (II) can be used to improve diagnostic and therapeutic methods for prostate or ancer. They can indicate the level of metastasis as well as the prostate volume. AAH93137 to AAH9314 and AAM01115 to AAM01318 represent the present

The invention relates to isolated prostate-specific polynucleotides, polypeptides, fusion proteins of the polypeptides, antibodies raised against the polypeptides (or antigenic epitopes derived from them) and antigen-presenting cells expressing the polypeptides. The antibodies are useful for detecting the presence of cancer, especially prostate cancer. The polypeptides, polynucleotides and the antigen-presenting cells are useful for stimulating and/or expanding T cells specific for a tumour protein, and for inhibiting the development of cancer especially prostate cancer. Compositions comprising the polynucleotide and/or polypeptide are useful for stimulating an immune response, and for treating cancer. The oligonucleotide is useful for detecting cancer. The prostate specific polynucleotide of the invention

The present invention describes an isolated polypeptide (PI) comprising at least an immunogenic portion of a prostate-specific protein, or its variant. Also described are polymucleotides (NI) encoding (PI). (PI) and (NI) have cytostatic activity and can be used in vaccine production. The polypeptides, nucleic actids and antibodies from the present invention are useful in the diagnosis and therapy of prostate cancer. Prostate specific genes P704P, P712P, P775P and B305D are located in a genomic region on chromosome 22q11.2 known as the Cat Eye Syndrome region. Prostate appecific antigen (PSA) P501S was located on chromosome 1.

ABL95290 standard; cDNA; 879

The invention describes a fusion protein comprising at least one amino acid sequence of immunogenic portions of any of the 3 sequences not defined in the specification, or sequences having at least 70 or 90 % sequence identity to any one of the 35 sequences defined in the USPTO web site, which is encoded by any of the 4 nucleotide sequences not defined in the specification. The fusion protein, composition and methods are useful for diagnosing, preventing and/or treating cancer, particularly prostate cancer. The proteins are useful as markers to indicate the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to novel breast tumour polynucleotides and polypeptides. The polypeptides and polynucleotides are useful in pharmaceutical compositions for treating and/or preventing cancer, particularly breast cancer, and for eliciting an immune response, particularly humoral and/or cellular immune response. The polynucleotides may be used as probes or primers for nucleic acid hybridisation, in the design and preparation of riboxyme molecules for inhibiting expression of tumour polypeptides and proteins, and in recombinant DNA molecules to direct expression of a polypeptide in host cells. AAS99570-AAS99888 represent novel human breast cancer protein coding sequences and PCR primers of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      101

                                        The present invention relates to novel prostate-specific proteins (PSP) and their coding sequences. The PSPs and their coding sequences are useful for stimulating an immune response in a patient, or for treating prostate cancer in a patient and for determining, detecting or diagnosing the presence of a cancer in a patient. The present sequence was used to
                                                                                                                                                                                                                                                                                             218

```
The invention relates to a breast tumour polynucleotide selected from one of the 275 fully defined nucleotide sequences (a) given in the specification, including their complements, sequences consisting of at least 20 contiguous residues of a sequence in (a), sequences that sequences having at least 75 or 96 identity to a sequence in (a), or degenerate variants of a sequence in (a). Also included are an isolated belynpeptide (II) (comprising an amino acid sequence selected from polypeptide (II) (comprising an amino acid sequence selected from sequences encoded by (a), sequences having at least 70% or 90% identity to a sequence in (c), and sequences of 30 fully defined amino acid sequences (c), and sequences having at least 70% or 90% identity to a sequence in (c)), expression vectors comprising (a), a host cell transformed or transfected with the expression vector, an isolated antibody or its antigen-binding fragment that specifically binds to (II),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New breast tumor proteins nucleic acids encoding such proteins, useful diagnosing, preventing and/or treating diseases such as cancer, particularly breast cancer, and as markers for detecting the presence or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ₹,

protein comprising the presence of a cancer in a patient, a fusion protein comprising at least one polypeptide (II), an oligomucleotide that hybridises to (a), under moderately stringent conditions, a method for stimulating and/or expanding T cells specific for a tumour protein (by contacting T cells with at least one component selected from (by antigen-presenting cells that express (II), an isolated T cell population comprising T cells prepared from as detailed above, a method for stimulating an immune response or treating cancer in a patient by administering a composition comprising (a), (II), the vector, cells or the antibodies, and a method for inhibiting the development of a cancer. The polypoptides may be used in the design and preparation of ribboyme molecules for inhibiting expression of the tumour polypeptides and proteins in tumour cells. The breast tumour proteins are useful as markers to indicate the presence or absence of a cancer, such as breast cancer, and in the detection of other cancers. Compositions comprising the breast tumour proteins are useful in diagnosing, comprising and/or treating diseases such as cancer, particularly breast funcer. The present sequence is a breast cancer, particularly breast funcer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  invention.

```
The present invention relates to compositions and methods for the therapy and diagnosis of cancer, particularly breast cancer. The method for detecting the presence of a cancer; in a patient comprises: obtaining a biological sample from the patient; contacting the biological sample with a binding agent that binds to the polypeptide; detecting in the sample an amount of the polypeptide that binds to the binding agent; and comparing the amount of the polypeptide to a predetermined cut-off value. Treating breast cancer comprises administering a composition comprising breast tumour proteins and nucleic acids, which simulates and/or expands I cells specific for the tumour protein. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       101
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       218
